**Legend**
- **C**: Continuation pattern: marks a consolidation phase in the current trend.
- **R**: Reversal pattern: points to a trend reversal.
- **N**: Neutral pattern: a move in either direction is possible.
The **Gold to Dow** ratio plots the price of gold against the level of the Dow Jones Industrial Average. Over long periods of time, the ratio has formed wave-like patterns as investors shift their preferences from gold to stocks, and vice versa.

The Gold to Dow ratio reached an all-time-high of 1.01 in January 1980, when the price of gold hit $878, and the Dow Jones was trading in a range. Since, stocks outperformed gold almost uninterrupted for 2 decades, until August 1999, when the ratio reached an all time low of 0.02.

It’s also possible to plot the inverse relationship, called **Dow to Gold** ratio:
The **Gold to Silver** ratio plots the price of gold against that of silver. Over long periods of time, this ratio has oscillated between support and resistance of 30:1 and 100:1 approximately respectively. The price of gold outperformed that of silver between 1980 and 1991, as well as between April 2011 and March 2020.

Importantly, ratio analysis says nothing about absolute performance. A rising ratio is consistent with: 1) gold rising faster in price than silver, 2) gold falling less than silver and 3) gold rising even as the price of silver falls. The following chart plots the price of gold and silver since 2019 in a split-pane, for illustration:
Top 3 Gold CFD Brokers

4XC

Open an account  Visit website  Read review

Not eligible: clients in the USA, Iran and other sanctioned countries.

Trade CFDs on the price of gold and silver with leverage up to 1:500 on MetaTrader 4 or 5. 4XC supports all trading styles and Expert Advisors. You’ll also get a 50% bonus on your first deposit (offer valid at the time of writing).

Equiti

Open an account  Visit website  Read review
